Projects

Developing KCoin Wallet Application

- Summary of this project:
 - Developed application which allows users to check their KCoin virtual currency information (referred to as money, KCC or the symbol ₩), including: execute and check the results of the transaction as well as transfer money among members
- Used api from <https://github.com/nguyenkha/kcoin-blockchain>
- Contributor of https://gitlab.com/vtdien/DACK_CNMTPTPM
- Contributed in:
 - Deploying both client and server to heroku host
 - Building database collection mongodb using mongcloud
 - Building Nodejs RESTful webservice API for user, wallets, admin (end user has to verify their account using email), Kcoin api
 - React – Redux Admin page
 - Redesign all of UI/UX
- Achievement:
 - UI/UX friendly
 - Transferring money among users in this system is very fast
 - Quickly transferring money to users outside of the system
 - 2factor email verification, verify, create transaction, and reset password by email
 - Achieved a 12/10 (120%) score on this project

Soft skills

- Work well under pressure
- Flexible, Adaptable, and Excellent communication skills
- Strong interpersonal skills developed while working in family grocery store

Extra-curricular activities

- Participated in “Thach thuc” contest of Faculty Information Technology in University
- Created a music video for the Dormitory Music Show
- Participated in “Clean Sunday” at dormitory
- Participated in Tug of War contest between wards in District 1
- Participated in Fire Drill contest between wards in District 1
- Helped extinguish a fire in the dormitory
- Created fire protection poster for dormitory
